

IoT

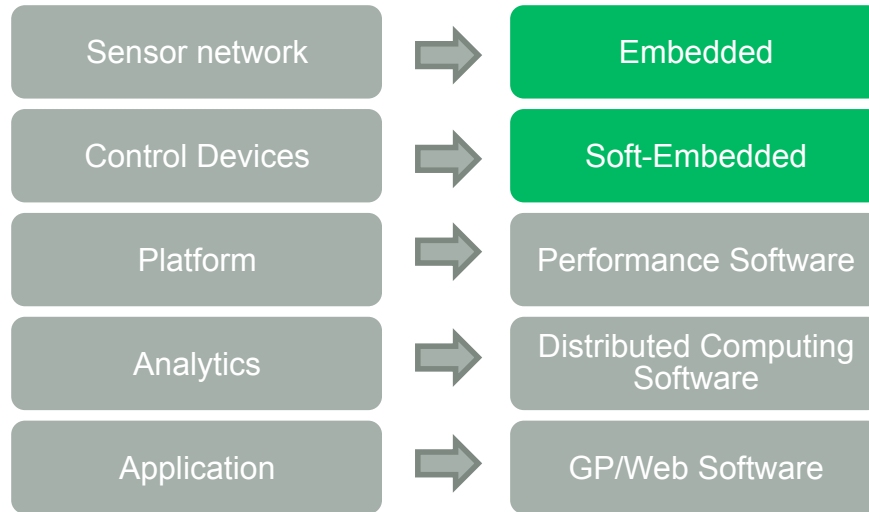

# Moving from Hobbies to the Real World

(an embedded view)

---

Saravanan Theckyam S

# IoT - Definition

# Software Stack that we are familiar with

- Linux distributions customized for Raspberry Pi:
  - Raspbian (Debian GNU/Linux for Raspberry Pi).
  - Raspbmc (XBMC for Raspberry Pi).
  - Arch Linux ARM.
  - Many more distributions in development.
- Python, Ruby, C, Bash Shell available by default.
- Most software from Debian ecosystem is available for download and installation on Raspbian.

# Open hardware platforms for IoT

Some Quick Examples...

Do you recognize these devices? See how they can be easily connected to the new Internet of Things

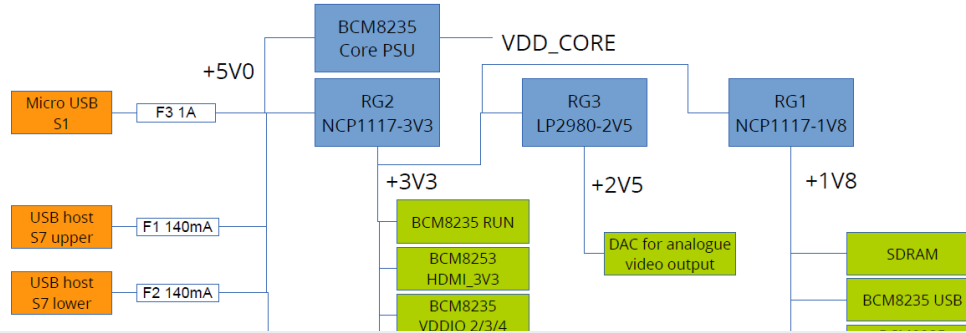

Is this good for 6.5 Billion connected things?

# Micro-Controller Unit's

# Raspberry Pi Architecture

Raspberry Pi is a General Purpose Computer
